EDUCATION

Wilfrid Laurier University – Waterloo, ON

Sep 2023 – Apr 2027

Bachelor of Science, Computer Science | Minor in User Experience Design

Relevant Coursework: Data Structures and Algorithms, Software Engineering, Operating Systems, Computer Networks, Web Development, UX Research Methods, Interaction Design, E-commerce

WORK EXPERIENCE

Indus Community Services — Mississauga, ON

May 2026 – Present

Database Analyst, Internship

- Built 3 Power BI dashboards for the DataGo project, reporting statistics at the program, department, and organization level across 52+ programs.
- Wrote and tested SQL queries and Python scripts to extract, clean, and validate the data that feeds those dashboards.
- Consolidated 5 years of monthly statistical reports into a structured Excel model, surfacing long-term trends across the organization's programs and services.
- Standardized data workflows with technical teams and external stakeholders, documenting each process in SOPs and user guides so staff can run them independently.

Afghan Network for Social Services — Scarborough, ON

May 2025 – Aug 2025

Backend Database Developer, Internship

- Migrated 200+ client records to MongoDB Atlas, improving query performance and simplifying how staff manage data day to day.
- Integrated Zeffy payments into the membership portal, cutting manual reconciliation work by roughly 50%.
- Designed and connected the database layer for an in-progress employee login system, building the schema for client record tracking and wiring it to the frontend.
- Worked with a cross-functional development team through GitHub, deploying changes via Netlify's CI/CD pipeline.

Psycho Bunny — Toronto Premium Outlets, Halton Hills, ON

May 2024 – Aug 2024

Sales Associate

- Assisted 50+ shoppers per shift with product selection and brand knowledge on a high-traffic outlet floor.
- Worked with the team to hit daily sales targets and keep the store running through weekend and holiday rushes.
- Processed transactions and returns accurately and kept visual merchandising standards up across the floor.

PROJECTS

Solace.ai | SPURHacks | [GitHub](#)

Jun 2025

- Designed and built the full frontend of an AI-powered journaling web app in a 36-hour hackathon, working with mentorship from industry engineers.
- Implemented voice-based journaling with real-time transcription and mood detection using Vapi and Gemini 2.5 Flash.
- Connected the app to Notion through n8n, automatically storing full transcripts alongside summaries with emotional insights and suggested next steps.

Grammatical Error Correction: LSTM vs. LLM | CP468 | [GitHub](#)

Aug 2026

- Analyzed and documented an LSTM sequence-to-sequence model for grammatical error correction, trained on a 40k-sentence shard of the C4_200M synthetic GEC dataset.
- Compared model output against an LLM baseline on a 5k held-out test set, identifying where each approach failed and why.
- Authored the system report covering architecture, training setup, and evaluation results for a 5-person team.

The Failure Museum | UXL Design-a-thon — 3rd Place | [Case Study](#)

Mar 2026

- Designed a reflective digital platform that reframed failure as a learning tool, built for university students across academic disciplines.
- Ran user research with 30+ survey responses and interviews, surfacing patterns in how students reflect on mistakes and where stigma gets in the way.
- Turned those findings into interactive concepts and prototypes, placing 3rd in a university-wide designathon.

Bitewise Software Engineering CP317 GitHub	Dec 2025
- Built the recipe database and its MongoDB schema, structuring dietary preference and recipe data for personalized meal recommendations. - Integrated external food APIs, debugging inconsistent response formats across sources so results came back in a usable shape. - Fixed bugs across the stack and contributed to the frontend, connecting recipe data to the interface users actually browsed.	
sumkhalid.me Personal Portfolio	2025 – Present
- Designed and built a personal portfolio site in Framer, developing a custom visual identity and interaction style across the whole experience. - Built custom code components with framer-motion, including an animated intro sequence and an interactive mini-game. - Structured UX case studies for the site, taking projects from Figma into Framer while keeping the interaction design intact.	
Echo UXL Designathon Case Study	Mar 2025
- Designed a community platform for casual music fans to discover local live events and meet people nearby who share their taste. - Ran a mixed-method survey of 26 respondents; wanting more local live events scored highest of any statement (4.54/5), while preferring to bond online rather than in person scored lowest (2.92/5). - Targeted the product at casual followers rather than superfans after 62% of respondents identified that way, and built discovery around Instagram and word of mouth — the two channels people actually used. - Delivered a mobile prototype and brand identity system across 10+ screens, addressing the barrier respondents ranked first: difficulty finding like-minded people.	
GreenBuddies Flow UW/UX Designathon Case Study	Jul 2025
- Designed a nature exploration app for children ages 7–12 that turns outdoor learning into photo-based quests, built against a prompt on reducing barriers in education. - Shaped the concept around research showing only 37% of Canadian school-aged children play outside daily and a third meet activity guidelines. - Designed navigation around visuals, audio, and emoji rather than text, so ESL students, neurodivergent learners, and non-readers could use the app independently. - Cut GPS tracking from the design and added image-recognition checks on uploads, keeping it classroom-safe without storing children's location data.	

VOLUNTEERING AND LEADERSHIP

Laurier Women in Computer Science — Waterloo, ON	Sep 2024 – Apr 2026
<i>Vice President, Finance</i>	Sep 2025 – Apr 2026
- Built a finance tracking system that cut budget approval turnaround by 30%. - Managed a \$4,000+ annual budget, tracking expenses, reimbursements, and allocations across multiple events. - Coordinated financial reporting with the students' union across the executive team.	
<i>Director of Outreach</i>	Sep 2024 – Apr 2025
- Secured industry speakers for club events, including talks from Google and PwC. - Ran outreach to companies, alumni, and other student clubs over LinkedIn and direct contact, building a pipeline of speakers and partners for the exec team. - Maintained ongoing company relationships beyond one-off events, giving the club contacts to return to in later terms.	
UX Laurier — Waterloo, ON	Sep 2024 – May 2025
<i>Director of Corporate</i>	
- Designed sponsorship packages and outreach materials that secured \$3,000+ in funding for student workshops. - Built relationships with sponsors and industry partners, opening return conversations for future events. - Coordinated sponsored events and initiatives that reached 200+ students across campus.	

SKILLS

Languages: Python, SQL, JavaScript, C, HTML/CSS
Frameworks & Tools: Node.js, Express, MongoDB, MongoDB Atlas, Git/GitHub, Docker, Power BI, Excel, Netlify, n8n
Design: Figma, Framer, Adobe Illustrator, Webflow, WordPress, Notion
Design Practice: UX research, wireframing, prototyping, interaction design, design systems, UX writing
